

RE: Controlled Burn Management

To Whom It May Concern,

Davey Resource Group is currently under contract to complete restoration and burn management for the following natural areas in your neighborhood:

-Olde Mill Natural Area (Planned burn areas mapped below)

Please consider this letter notification that controlled burning will take place between November 1st, 2022 and December 31 2024. Burn management will include complete site preparation, and low-intensity burning of dry native vegetation. The burn will be monitored at all times by experienced personnel and protective equipment, and will be completely extinguished upon completion. Please be assured that extinguishment and contingency plans are in place, and that controlled burning presents no potential risk to nearby structures and fuels. The entire burn management process will not take more than one working day.

All burning will be conducted in accordance with Illinois EPA, county, and municipal open burning regulations. All burning is done under the general supervision of a field supervisor. Our field staff is uniformed and supervised by working site managers. All vehicles and equipment are marked with the company logo. This allows you the assurance of easy identification of our equipment and personnel. All of our trucks are two-way radio equipped for easy contact to our maintenance facility and office. In addition, field supervisors and foremen are equipped with radios and cellular phones at all times.

Please be aware that future annual maintenance of this work area includes controlled burns to control fuel loads and promote the establishment of native vegetation. Please feel free to contact our offices with any additional questions you may have regarding this matter.

Regards,

Tony Lazzara
